### Research Summary

Biolubricants are lubricants that are derived from renewable and biodegradable sources, such as vegetable oils, animal fats, or other bio-based materials. They are used to reduce friction and provide lubrication in various applications, including automotive, industrial, and commercial sectors. Biolubricants offer several advantages over conventional petroleum-based lubricants, including better biodegradability, reduced toxicity, and lower environmental impact. They are often formulated to meet specific performance requirements and can provide excellent lubrication, protection against wear and corrosion, and improved energy efficiency. Biolubricants are considered more environmentally friendly and sustainable options, as they are derived from renewable resources and have a reduced carbon footprint. Their use contributes to reducing reliance on fossil fuels and minimizing the environmental impact associated with lubricant use.

The major global manufacturers of Biolubricants include Exxon Mobil, Shell, British Petroleum., TOTAL, Chevron, Renewable Lubricants, Panolin, UBL, Statoil Lubricants,

Binol Biolubricants, etc. The global players competition landscape in this report is divided into three tiers.
