Research Summary

Biomass fuel, specifically Palm Kernel Shell (PKS), is a renewable energy source derived from the hard outer shell of palm kernels, a byproduct of palm oil production. PKS is widely used as a biofuel in industrial boilers and power plants due to its high calorific value, low moisture content, and environmentally friendly characteristics. As a carbon-neutral alternative to fossil fuels, PKS helps reduce greenhouse gas emissions while promoting sustainable waste management. Its abundance, cost-effectiveness, and efficiency make it an increasingly popular choice for biomass energy generation, particularly in countries seeking to transition to greener energy solutions.

The major global manufacturers of Biomass Fuel (PKS) include Iwatani Corporation, NISSIN BIO ENERGY, DSNG (PT Dharma Satya Nusantara Tbk), BIO ENECO, Palmline Bioenergy, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier

includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
