### Research Summary

Biomedical textiles, also known as medical textiles or healthcare textiles, refer to a specialized category of textile materials and products used in various biomedical applications. These textiles are specifically designed to meet the unique requirements of the healthcare industry, including comfort, hygiene, durability, and biocompatibility. Biomedical textiles find application in wound dressings, surgical drapes and gowns, orthopedic implants, prosthetics, bandages, compression garments, and other medical devices. They can be made from natural fibers, synthetic fibers, or a combination of both, and may undergo treatments to enhance their antimicrobial, moisture-wicking, or breathability properties.
