Research Summary

A bioresorbable scaffold, also known as a bioresorbable stent or bioresorbable vascular scaffold (BVS), is a medical device used to treat coronary artery disease. It is a small mesh tube made of a biodegradable polymer that is inserted into a blocked artery to open it up and restore blood flow. Unlike traditional stents, which are made of metal and remain in the artery permanently, bioresorbable scaffolds gradually dissolve over time, leaving the artery in its natural state. This is thought to reduce the risk of long-term complications such as stent thrombosis and restenosis. The use of bioresorbable scaffolds is still relatively new, and ongoing clinical trials are evaluating their efficacy and safety compared to traditional stents.

The major global manufacturers of Bioresorbable Scaffold include Abbott, Kyoto Medical, REVA Medical, Biotronik, Elixir Medical, etc. The global players competition landscape in this report is divided into three tiers.
