### Research Summary

Bioresorbable vascular scaffold (BVS) is a medical device made of a biodegradable material that is used to treat blocked arteries in the heart known as coronary artery disease. It is inserted into the affected artery to provide structural support to the vessel and keep it open and patent. The scaffold is designed to gradually dissolve over time and be replaced by the patient's own tissue, leaving behind a stronger, more natural vessel. BVS is typically used as an alternative to metallic stents, which remain in the patient's body permanently and may restrict the vessel's ability to expand and contract naturally. However, BVS is not suitable for all patients and may carry certain risks, including thrombosis, or blood clotting, which can lead to heart attack or stroke.

The major global manufacturers of Bioresorbable Vascular Scaffold include Medtronic, Abbott Laboratories, Boston Scientific Corporation, Biosensors International, BIOTRONIK, Meril Life Sciences, Kyoto Medical Planning, etc. The global players competition landscape in this report is divided into three tiers.
