Research Summary

Biostimulants are substances or microorganisms that are applied to plants, seeds, or soil to enhance plant growth, development, and overall health. These products are distinct from fertilizers, as they do not provide essential nutrients directly to plants but instead stimulate natural processes and improve the plant's ability to utilize nutrients, resist stress, and enhance tolerance to environmental conditions. Biostimulants can be derived from various sources, including plant extracts, seaweed extracts, beneficial microorganisms, and other natural compounds. They can have a range of effects, such as promoting root growth, improving nutrient uptake, enhancing plant defense mechanisms, and increasing tolerance to abiotic stresses like drought or extreme temperatures. Biostimulants are used in agriculture and horticulture to optimize plant productivity, enhance crop quality, and promote sustainable and eco-friendly farming practices.

The major global manufacturers of Biostimulants include Biolchim, Valagro, Isagro, SICIT Group, Bioiberica, Hello Nature, Biovert, TIMAC AGRO, Tradecorp, Agronutrition,
