### Research Summary

Biosurfactants are surface-active molecules produced by living organisms, such as bacteria, yeast, and fungi. These natural compounds have unique properties that allow them to reduce surface tension and interact with both hydrophobic (water-repellent) and hydrophilic (water-attracting) substances. Biosurfactants have diverse applications in various industries, including agriculture, pharmaceuticals, cosmetics, and environmental remediation. They can enhance the effectiveness of cleaning products, improve oil recovery in the petroleum industry, act as emulsifiers and stabilizers in food and beverage formulations, and aid in the degradation of pollutants in contaminated environments. Compared to synthetic surfactants, biosurfactants are often considered more environmentally friendly and sustainable due to their renewable and biodegradable nature. Additionally, biosurfactants show potential in biomedical applications, such as drug delivery systems and wound healing products.

The major global manufacturers of Biosurfactant include Evonik, Jeneil Biosurfactant, AGAE Technologies, Xi'an Rege Biotechnology, Allied Carbon Solutions, Stepan,
