### Research Summary

Bipolar membrane electrodialysis (BPMED) is an advanced separation technology that combines the features of electrodialysis with the unique properties of bipolar membranes to achieve the efficient separation and production of acids and bases from salt solutions. In this process, an electric field drives the migration of ions through selectively permeable membranes arranged in a stack. Bipolar membranes, positioned within this stack, dissociate water molecules into hydrogen and hydroxide ions at their interface, which then react with the transported ions to form acids and bases. This technology is particularly advantageous for its ability to generate high-purity products, reduce chemical consumption, and operate under mild conditions, making it valuable in applications such as water treatment, chemical manufacturing, and resource recovery from waste streams.

The major global manufacturers of Bipolar Membrane Electrodialysis include FuMA-Tech, PCCell GmbH, Astom, Evoqua, Suez, Eurodia, Mega, Lenntech, Shandong Tianwei, Bluestar (Hangzhou), Xiamen Filter & Membrane Technology Co, Hangzhou

Lanran Environmental, Beijing Tingrun, etc. The global players competition landscape in this report is divided into three tiers.
