### Research Summary

Bismaleimide (BMI) resins are a type of high-performance thermosetting polymer with exceptional thermal and mechanical properties. BMI resins are derived from maleimide monomers and are known for their high heat resistance, excellent dimensional stability, and good chemical resistance. They are commonly used in industries such as aerospace, automotive, electronics, and composites manufacturing, where demanding performance requirements are necessary. BMI resins are often used as matrix materials in advanced composite materials due to their ability to withstand high temperatures and maintain structural integrity. They are cured through a crosslinking process, resulting in strong and rigid polymer networks. BMI resins offer advantages such as low moisture absorption, flame resistance, and good electrical properties, making them ideal for applications where lightweight, durable, and high-strength materials are required.

The major global manufacturers of Bismaleimide (BMI) Resins include Evonik, Hexcel, Huntsman, Solvay, HOS-Technik, Renegade Materials (Tenjin), ABROL, Honghu Shuangma Advanced Materials Tech, Qinyang Tianyi Chemical, MCCFC, etc. The
