Research Summary

Bismaleimide (BMI) is a thermosetting resin that belongs to the class of aromatic imides. It is a high-performance polymer known for its exceptional thermal stability, mechanical strength, and chemical resistance. Bismaleimide resins are used in a variety of industries, including aerospace, automotive, electronics, and composites manufacturing. They are commonly employed as matrix materials in advanced composite materials, such as carbon fiber-reinforced composites, due to their ability to withstand high temperatures and maintain structural integrity under extreme conditions. Bismaleimide resins exhibit excellent dimensional stability, low moisture absorption, and good flame resistance, making them suitable for applications that require lightweight, durable, and high-strength materials. They are often cured through a heat-induced crosslinking process, forming strong and rigid polymer networks with desirable mechanical and thermal properties.

The major global manufacturers of Bismaleimide include Evonik, Hexcel, Huntsman, Daiwakasei Industry, K.I Chemical, HOS-Technik, ABROL, Honghu Shuangma
