Research Summary

Bladder scanners are medical devices used to assess the volume of urine in the bladder non-invasively. They utilize ultrasound technology to measure the bladder's size and determine the amount of urine present. The scanner consists of a handheld probe that emits ultrasound waves and captures the reflected waves to create a real-time image of the bladder. By analyzing the image, healthcare professionals can estimate the bladder volume and assess urinary retention or the effectiveness of bladder emptying. Bladder scanners are commonly used in healthcare settings such as hospitals, clinics, and long-term care facilities. They offer a non-invasive alternative to catheterization, reducing the risk of urinary tract infections and discomfort for the patient. Bladder scanners are particularly valuable in managing patients with conditions like urinary incontinence, urinary retention, or postoperative care, where accurate measurement of bladder volume is important for diagnosis and treatment decisions.

The major global manufacturers of Bladder Scanners include Verathon, LABORIE, Vitacon, DBMEDx, MCube Technology, Meike, SRS Medical, Echo-Son, Caresono,
