### Research Summary

Blanking presses are machines used in the manufacturing industry for the process of blanking, which involves cutting flat sheet metal into predetermined shapes or blanks. These presses are specifically designed to efficiently and precisely cut out shapes from metal sheets using a die and a punch. The die is a specialized tool with a cavity that corresponds to the desired shape, while the punch is a tool that fits into the die and applies force to cut through the metal. Blanking presses can be mechanical, hydraulic, or pneumatic, and they come in various sizes and capacities to accommodate different sheet metal thicknesses and production requirements. They are often automated or semi-automated, allowing for high-speed and repetitive cutting operations. Blanking presses are commonly used in industries such as automotive, aerospace, appliance manufacturing, and metal fabrication, where precise and efficient cutting of sheet metal is essential for the production of various components and parts.

The major global manufacturers of Blanking Presses include Schuler, Komatsu, Aida, JIER, Yangli Group, SMS Group, Isgec Heavy Engineering, QIQIHAR NO.2, Chin Fong,
