Research Summary

A BLE chip, short for Bluetooth Low Energy chip, is an integrated circuit designed to enable Bluetooth wireless communication with low power consumption. BLE technology is a variant of the classic Bluetooth protocol, optimized for low-power applications, making it ideal for devices with limited battery capacity or operating on small power sources. BLE chips are commonly used in various electronic devices, including smartphones, smartwatches, fitness trackers, medical devices, and IoT (Internet of Things) devices. These chips enable devices to communicate wirelessly with other Bluetooth-enabled devices or peripherals, such as sensors, actuators, or smartphones, over short distances. BLE chips typically include a microcontroller, radio transceiver, and Bluetooth protocol stack, allowing them to establish and maintain Bluetooth connections while consuming minimal power. They are key components in the development of wireless and IoT applications, providing reliable, energy-efficient communication between devices.

The major global manufacturers of BLE Chip include Nordic Semiconductor, ZhuHai Jieli Technology, Renesas, TI, STMicroelectronics, Qualcomm, Silicon Labs, Realtek,
