Research Summary

Bleached Chemi-ThermoMechanical Pulp (BCTMP) is a type of wood pulp that is produced using a combination of chemical, thermal, and mechanical processes. It starts with debarked wood chips that are treated with chemicals to soften the lignin, which holds the wood fibers together. Then, the wood chips are mechanically processed using heat and pressure to separate the fibers and create a pulp. The pulp is then bleached to remove any residual lignin and other impurities, resulting in a bright white or off-white color. BCTMP is known for its high brightness, good strength properties, and versatility, making it suitable for various applications in the paper and paperboard industry. It is commonly used in the production of printing papers, tissue papers, packaging materials, and specialty papers. BCTMP offers an alternative to traditional chemical pulping methods and provides a sustainable option for producing high-quality pulp from wood fibers.
