### Research Summary

Bleached Chemi-Thermomechanical Pulp (BCTMP) is a type of pulp produced from wood fibers using a combination of chemical and mechanical processes. In the BCTMP manufacturing process, wood chips are first treated with chemicals to soften the lignin, the natural adhesive that binds the fibers together. Then, the softened wood chips are mechanically treated under heat and pressure to further separate the fibers. This process results in pulp with improved strength and brightness compared to traditional mechanical pulp. After production, BCTMP is often bleached to achieve a higher level of brightness, making it suitable for use in a variety of paper and board products, including printing and writing papers, tissue, and packaging materials. BCTMP is valued for its cost-effectiveness, versatility, and environmental sustainability, as it allows for efficient utilization of wood resources and reduces the need for chemical bleaching agents compared to traditional bleached pulp production methods.

The major global manufacturers of Bleached Chemi-Thermous Mechanical Pulp (BCTMP) include METSA FIBRE, West Fraser, Paper Excellence Canada, Millar Western, Pan Pac Forest Products, Canfor, Waggeryd Cel, Winstone, etc. The global players competition landscape in this report is divided into three tiers.
