Research Summary

Blended cement is a type of cement produced by blending or mixing different types of cementitious materials with clinker, which is the main component of ordinary Portland cement (OPC). The additional materials used in blended cement can include fly ash, slag, silica fume, or other pozzolanic materials. The blending process is done during the manufacturing of the cement, where the additional materials are finely ground and mixed with the clinker to form a homogenous powder. Blended cement offers several advantages over OPC, including improved durability, reduced carbon footprint, and enhanced workability. The incorporation of supplementary cementitious materials in blended cement helps in enhancing strength, reducing heat of hydration, and increasing resistance to sulfate attack and alkali-silica reaction. Blended cement is commonly used in construction applications, such as concrete production, where it provides sustainable and performance-enhancing properties to the final product.

The major global manufacturers of Blended Cement include Cemex, LafargeHolcim, Italcementi, Heidelberg, Taiheiyo, Dyckerhoff, RMC, Cimpor, Buzzi Uncem, etc. The global players competition landscape in this report is divided into three tiers. The first
