Research Summary

Blister packaging using CPP (Cast Polypropylene) aluminum composite film is a specialized packaging solution commonly used in the pharmaceutical and consumer goods industries. This type of packaging combines the strength and barrier properties of aluminum with the flexibility and heat-sealability of cast polypropylene. The aluminum layer provides excellent protection against light, moisture, and gases, ensuring the stability and shelf life of the packaged product. The CPP layer offers durability, ease of processing, and a secure seal, making it ideal for creating blister packs that securely enclose tablets, capsules, and other small items. This composite film is favored for its ability to preserve product integrity, enhance user convenience, and provide a tamper-evident solution, while also being lightweight and cost-effective.
