Research Summary

Blockchain is a decentralized digital ledger technology that allows for secure, transparent, and immutable record-keeping of transactions or data. It is built upon a distributed network of computers known as nodes, where each node has a copy of the entire blockchain database. Transactions are grouped into blocks and linked together in a chronological and cryptographic manner, forming a chain of blocks. The unique feature of blockchain is that it enables trust and eliminates the need for intermediaries, such as banks or central authorities, as transactions are verified and recorded by multiple participants in the network. This makes blockchain resistant to tampering and fraud. The technology finds applications in various industries, including finance, supply chain management, healthcare, and more, offering benefits such as increased efficiency, transparency, security, and cost savings.

The major global suppliers of Block Chain include IBM, Amazon AWS, Accenture, SAP, Microsoft, Oracle, Deloitte, ConsenSys, EY, Chainalysis, Infosys, Power Ledger, Alibaba Cloud, Tencent, Huawei, Baidu, etc. The global players competition landscape in this report is divided into three tiers.
