Research Summary

Blockchain identity software refers to applications and platforms that utilize blockchain technology to manage and secure digital identities. It enables individuals to have more control over their personal data and provides a decentralized and immutable system for verifying and authenticating identities. Blockchain-based identity software allows users to create a digital identity that is stored on the blockchain, eliminating the need for centralized identity management systems. It offers enhanced privacy and security by using cryptographic techniques to protect sensitive information. Users can selectively disclose their identity attributes, granting access to specific data only when necessary, thereby reducing the risk of data breaches and identity theft. Additionally, blockchain identity software enables seamless and secure authentication processes, reducing the reliance on traditional username-password systems. By leveraging the transparency and immutability of blockchain, this technology has the potential to revolutionize digital identity management by giving individuals greater ownership and control over their personal information.

The major global suppliers of Blockchain Identity Software include IBM, Accenture, Kaleido, BlockCypher, Hyperledger, Digital Bazaar, 1Kosmos, BlockScore, BlocWatch, B2Lab, Cambridge Blockchain, Civic Technologies, Credify, Dragonchain, Evernym, Factom, HYPR, idRamp, Monetha, Netki, OARO, OARO, Tokeny Solutions, Trust Stamp, etc. The global players competition landscape in this report is divided into three tiers.
