### Research Summary

A blood pressure monitor with ECG (electrocardiogram) is a medical device that combines two vital health monitoring functions: measuring blood pressure and recording the electrical activity of the heart. This integrated device allows for the simultaneous monitoring of blood pressure, typically through a cuff that inflates around the arm, and an ECG, which uses electrodes to capture the heart's electrical signals. By providing both readings in one unit, it offers a comprehensive view of cardiovascular health, enabling users or healthcare professionals to track blood pressure trends and detect irregularities in heart rhythm, such as arrhythmias. This type of device is particularly beneficial for patients with cardiovascular conditions or those who require frequent monitoring, as it simplifies the process and enhances diagnostic accuracy. Blood pressure monitors with ECG are commonly used in home healthcare settings, hospitals, and clinics for continuous heart and blood pressure health management.

The major global manufacturers of Blood Pressure Monitor with ECG include OMRON Healthcare, Lepu Medical, Beurer, Philips, Withings, EASYCARE, Trister, etc. The
