Research Summary

A blood pressure testing device, also known as a sphygmomanometer or blood pressure monitor, is a medical instrument used to measure the pressure of blood in the arteries. This device typically consists of an inflatable cuff, a gauge or digital display, and sometimes a stethoscope, depending on whether it is a manual or automated model. When the cuff is inflated around the upper arm, it temporarily restricts blood flow, and as the cuff deflates, the device measures the systolic and diastolic pressures—representing the force of blood against artery walls during heartbeats and in between them. Modern automated blood pressure monitors, often used at home, are digital and easy to operate, providing fast and accurate readings without the need for medical training. These devices are essential for monitoring cardiovascular health, detecting hypertension, and guiding treatment for patients with heart-related conditions.

The major global manufacturers of Blood Pressure Testing Device include OMRON, Yuyue Medical Equipment, A&D, Microlife, NISSEI, Citizen, Rossmax, Beurer, Welch Allyn, Andon Health, Hangzhou Sejoy Electronics & Instruments, Bosch + Sohn,
