Research Summary

Blow molding machine is a manufacturing machine used to produce various plastic products by blow molding process. In the blow molding process, melted plastic is pumped into a mold cavity where it is blown into desired shape and size using compressed air. The machine consists of a processing unit, molds, and an extruder. The extruder is responsible for melting and distributing the plastic into the mold, while the molds are responsible for shaping the plastic into desired shape and size. Blow molding machines are commonly used to produce plastic bottles, containers, and other hollow products.
