### Research Summary

A bonded magnet is a type of magnet made by combining magnetic powder with a resin or polymer binder. The mixture is then compression molded or extruded to create a final shape. This process allows for complex shapes to be created that would be difficult or impossible to produce with traditional magnet manufacturing methods. Bonded magnets are typically weaker than traditional magnets, but have a higher resistance to demagnetization, which can be an advantage in certain industrial applications.

The major global manufacturers of Bonded Magnet include Galaxy Magnets, Zhong Ke San Huan Hi-Tech, Daido Electronics, IMA, Ningbo Yunsheng, Arnold Magnetic Technologies, TDK, DMEGC, MS-Schramberg, Sen Long Corporation, Jiangmen Magsource, AT & M, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively

follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
