Research Summary

Bone fixation screws are small medical devices used in orthopedic surgeries to secure fractured or surgically repaired bones. They are typically made of biocompatible materials such as stainless steel or titanium. These screws have a threaded design and come in various lengths and diameters to accommodate different bone types and fracture patterns. During the surgical procedure, the screws are carefully inserted into the bone, providing compression and stability by anchoring the bone fragments together. The threads of the screw engage with the bone, allowing for secure fixation and promoting proper alignment of the fractured bone segments. Bone fixation screws are essential in promoting bone healing and ensuring the integrity and strength of the bone during the recovery process. Depending on the specific case, the screws may be removed after the bone has healed, or they may be left in place permanently.

The major global manufacturers of Bone Fixation Screws include DePuy Synthes, Stryker, Zimmer Biomet, Smith & Nephew, Wright Medical, B Braun, Medtronic, Globus Medical, Orthofix Holdings, MicroPort, NuVasive, BioHorizons IPH, etc. The global
