Research Summary

Bone mineral testing is a diagnostic procedure used to measure the density and strength of bones, helping to assess the risk of fractures and conditions like osteoporosis. The most common method for this testing is Dual-Energy X-ray Absorptiometry (DEXA), which uses low-dose X-rays to evaluate bone mineral density (BMD) at key sites such as the spine, hip, or wrist. Other techniques, such as quantitative ultrasound (QUS) and quantitative computed tomography (QCT), can also be used for specific assessments. Bone mineral testing is crucial for early detection of bone loss, monitoring the effectiveness of treatments, and guiding preventive measures for maintaining bone health, particularly in older adults and individuals with risk factors like hormonal imbalances or prolonged medication use.

The major global suppliers of Bone Mineral Testing include Roche, BioMerieux, Immunodiagnostic Systems (IDS), Bio-Rad Laboratories, DiaSorin, Immundiagnostik, QuidelOrtho, Snibe, Takara Bio, Aidian, Phicon, Biomedica, Novus Biologicals, Eagle Biosciences, Krishgen, etc. The global players competition landscape in this report is
