### Research Summary

Bone Morphogenetic Protein (BMP) is a group of growth factors and signaling molecules that play a crucial role in the regulation of bone formation, healing, and regeneration. BMPs belong to the transforming growth factor-beta (TGF-?) superfamily and are involved in promoting the differentiation of stem cells into bone-forming cells (osteoblasts) and the formation of bone tissue. These proteins are naturally occurring in the body and are essential for the development of the skeletal system during embryonic growth and for the repair of bone fractures in adults. In medicine, recombinant BMPs are used in orthopedic and dental treatments to enhance bone healing, particularly in spinal fusion surgeries and bone grafts, making them an important therapeutic tool in regenerative medicine.

The major global manufacturers of Bone Morphogenetic Protein (BMP) include Medtronic, Jiuyuan Gene Engineering, Cellumed, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading
