Research Summary

Bone sonometers are specialized medical devices used to measure bone density and assess the strength and health of bones. They utilize ultrasound technology to evaluate the density and quality of bones, primarily in the peripheral skeletal sites such as the heel or shin bone. During the examination, the sonometer emits ultrasound waves into the bone, and the device measures the speed and frequency of the waves as they travel through the bone. This information is then used to calculate the bone mineral density (BMD) and assess the risk of osteoporosis and fractures. Bone sonometers are non-invasive, painless, and offer a portable and convenient method for screening and monitoring bone health. They are commonly used in clinical settings, such as hospitals, clinics, and densitometry centers, to aid in the diagnosis, treatment, and management of osteoporosis and other bone-related conditions.

The major global manufacturers of Bone Sonometers include GE Healthcare, Hologic, Furuno Electric, Osteosys, DMS, Swissray (Norland), BeamMed, Scanflex Healthcare (Demetech AB), Osteometer Meditech, Xianyang Kanrota, L'can, BM Tech, Lone Oak
