Research Summary

BOPP capacitor film refers to a type of film made from biaxially oriented polypropylene (BOPP) that is specifically designed for use in capacitors. Capacitors are electronic components that store and release electrical energy. BOPP capacitor film possesses excellent electrical properties, including high dielectric strength and low dissipation factor, making it well-suited for capacitor applications. The film is manufactured through a process of biaxial stretching, which imparts dimensional stability and uniform thickness to ensure consistent performance. BOPP capacitor film offers good temperature resistance, moisture resistance, and high insulation properties, allowing it to withstand electrical stress and provide reliable performance over a wide range of operating conditions. It is used extensively in the production of capacitors for various applications, including power electronics, telecommunications, automotive systems, and consumer electronics.

The major global manufacturers of BOPP Capacitor Film include AEC GROUP, Bollore, Borclean, Braskem, FSPG HI-TECH, FlexFilm, Gettel Group, Kopafilm Elektrofolien,
