Research Summary

BOPP synthetic paper refers to a type of paper-like material made from biaxially oriented polypropylene (BOPP) film. It is a durable and tear-resistant substrate that mimics the appearance and texture of traditional paper but offers enhanced properties and performance. BOPP synthetic paper is manufactured by subjecting the BOPP film to a biaxial stretching process, resulting in a material that exhibits excellent dimensional stability, moisture resistance, and durability. It has a smooth surface that is suitable for printing, and it can be coated for added protection and enhanced print quality. BOPP synthetic paper is commonly used in applications where traditional paper may not be suitable, such as outdoor signage, labels, tags, maps, manuals, and other printed materials that require resistance to water, tearing, and fading. It offers a cost-effective and versatile alternative to paper, providing durability and longevity in various printing and packaging applications.

The major global manufacturers of BOPP Synthetic Paper include Yupo, Nan Ya Plastics, HOP Industries, American Profol, etc. The global players competition
