Research Summary

Bottle brick recycling involves repurposing plastic bottles filled with non-biodegradable waste materials to create sustainable building materials. Typically, these bottles are packed tightly with materials like plastic bags, wrappers, or other non-recyclable plastics, reducing their volume and preventing them from contributing to landfill waste or ocean pollution. Once packed, these bottle bricks can be used as construction blocks in various building projects, such as walls, benches, or even entire structures. This recycling method not only helps reduce environmental impact by reusing waste materials but also provides affordable building solutions in communities where traditional building materials may be scarce or expensive. Bottle brick recycling promotes both environmental sustainability and socio-economic benefits by turning waste into valuable resources for construction and infrastructure development.

The major global manufacturers of Bottle Brick Recycling include Indorama Ventures, Far Eastern New Century Co., Ltd., Alpek (DAK Americas), Plastipak Holdings, Greentech, Visy, SUEZ, Veolia, Longfu Environmental Energy, Jiulong Recycling
