Research Summary

BPADA, which stands for Biphenyl-4,4'-dicarboxylic acid, is a chemical compound belonging to the class of aromatic dicarboxylic acids. It is derived from biphenyl, a hydrocarbon consisting of two phenyl rings linked together. BPADA is known for its high heat resistance and is often used as a monomer in the production of high-performance polymers, such as liquid crystal polymers (LCPs) and polyimides. These polymers exhibit excellent thermal stability, mechanical strength, and resistance to chemicals and solvents. BPADA-based polymers find applications in various industries, including electronics, aerospace, automotive, and telecommunications, where materials with superior performance and reliability are required.

The major global manufacturers of BPADA include SABIC, GuChuang New Chemical Materials, Shanghai Plastics Research Institute, etc. The global players competition landscape in this report is divided into three tiers.
