### Research Summary

Braided medical tubing is a type of reinforced tubing used in medical applications, designed for enhanced strength, flexibility, and durability. It consists of an inner tube, typically made from materials such as silicone, polyurethane, or PVC, which is surrounded by a braided mesh layer, often made from materials like polyester, nylon, or stainless steel. This braided mesh provides structural reinforcement, preventing the tubing from collapsing or kinking under pressure, while maintaining its flexibility and lightweight properties. Braided medical tubing is commonly used in a variety of medical devices, such as catheters, intravenous (IV) lines, and blood pressure monitoring systems, where the tubing needs to withstand high-pressure conditions, resist abrasion, and ensure reliable performance over time. The braid also helps improve the tubing's resistance to mechanical stress and chemical exposure, making it suitable for applications in critical care, diagnostics, and surgeries.

The major global manufacturers of Braided Medical Tubing include Duke Extrusion, Asahi Intecc, Freudenberg Medical, Lubrizol, Nordson MEDICAL, TELEFLEX,
