### Research Summary

Braided sleeve and textile sleeve are protective coverings used to shield and organize cables, wires, hoses, and other components in various industries. Braided sleeves are typically constructed by weaving fibers, such as nylon, polyester, or fiberglass, into a tubular shape, creating a flexible and durable covering that offers resistance to abrasion, chemicals, and heat. They are commonly used in automotive, aerospace, marine, and industrial applications to protect and bundle cables and wires, providing insulation and mechanical protection against wear and tear. Textile sleeves, on the other hand, are made from woven or knitted fabrics, such as polyester or cotton, and offer similar protective properties as braided sleeves. However, textile sleeves may provide more flexibility and softness compared to braided sleeves, making them suitable for applications where flexibility and ease of installation are important. Both braided and textile sleeves are available in various sizes, colors, and configurations to accommodate different cable diameters and application requirements. They are essential components for organizing and protecting cables and wires in a wide range of industries, ensuring reliable performance and longevity of electrical systems.

The major global manufacturers of Braided Sleeve and Textile Sleeve include Tenneco, Delfingen, JDDTECH, Relats, HellermannTyton, Techflex, Tresse Industrie, Safeplast, etc. The global players competition landscape in this report is divided into three tiers.
