Research Summary

A brake disc, also known as a brake rotor, is a vital component of a disc brake system used in vehicles to facilitate the process of slowing down or stopping. It is typically a flat, circular metal disc that is mounted directly to the wheel hub or axle. When the brake pedal is pressed, brake calipers clamp down on the brake discs, creating friction. This friction converts the kinetic energy of the rotating wheel into heat energy, causing the vehicle to slow down or come to a complete stop. Brake discs are commonly made from cast iron or composite materials with high heat resistance to handle the intense friction and dissipate heat effectively. They come in different designs, including vented or slotted discs that enhance cooling and performance. Brake discs are essential for efficient braking, providing reliable stopping power and effective heat dissipation to ensure safe operation of the vehicle.

The major global manufacturers of Brake Disc include Brembo, Winhere Auto-Part, Aisin Seiki, Kiri, Bocsh, ZF TRW, Continental, TEXTAR, AC delco, Lpr Break, Accuride Gunite, EBC Brakes, Remsa, etc. The global players competition landscape in this report is divided into three tiers.
