Research Summary

A brake system is a crucial component in vehicles that enables the controlled slowing down or stopping of the vehicle. It is responsible for converting the kinetic energy of the moving vehicle into heat energy through the process of friction. The brake system consists of several key components, including brake discs (or rotors), brake pads, brake calipers, brake lines, and a master cylinder. When the brake pedal is pressed, hydraulic pressure is created in the master cylinder, which is transmitted through the brake lines to the brake calipers. The calipers then apply pressure to the brake pads, causing them to make contact with the rotating brake discs. This contact generates friction, resulting in the vehicle's deceleration. The brake system plays a critical role in vehicle safety, providing reliable stopping power, responsiveness, and control. Regular maintenance and inspections are necessary to ensure the proper functioning of the brake system and to address any potential issues promptly.

The major global manufacturers of Brake System include Knorr-Bremse, Wabco, Haldex, Nabtesco-Automotive, Tenneco (Federal-Mogul), Aventics (Emerson), Ruili

Group, MGM Brakes, Sealco, TSE Brakes, Fritec, etc. The global players competition landscape in this report is divided into three tiers.
