Research Summary

A brake wear indicator, also known as a brake pad wear sensor or brake pad indicator, is a small component integrated into the braking system of a vehicle to alert the driver when the brake pads are worn and in need of replacement. It is typically a thin metal strip or a small electrical sensor attached to the brake pad. As the brake pad wears down due to friction, the wear indicator comes into contact with the brake rotor, causing a distinctive squealing or scraping noise. This audible warning serves as an indication to the driver that the brake pads have reached a minimum thickness and need to be replaced to maintain optimal braking performance and safety. Brake wear indicators act as an early warning system, allowing vehicle owners to address brake pad wear before it leads to reduced braking efficiency or damage to other braking system components. Monitoring and responding to brake wear indicators promptly is essential to ensure reliable braking and safe operation of the vehicle.

The major global manufacturers of Brake Wear Indicator include Federal Mogul, BOSCH, WABCO, Delphi, FTE, Brembo, TRW, CAT, Standard, SADECA, Continental,
