Research Summary

Brakes are essential components of a vehicle's system that enable the driver to slow down, control speed, and bring the vehicle to a complete stop. They work by converting the vehicle's kinetic energy into heat energy through friction. The most common types of brakes used in vehicles are disc brakes and drum brakes. Disc brakes consist of brake pads that clamp down on a rotating brake disc, while drum brakes have brake shoes that press against the inner surface of a rotating brake drum. When the driver applies pressure to the brake pedal, hydraulic fluid is transmitted through the brake lines to the brake calipers or wheel cylinders, causing the brake pads or shoes to make contact with the brake disc or drum. This contact generates friction, which slows down the rotation of the wheels and ultimately brings the vehicle to a stop. Brakes play a critical role in vehicle safety, and regular inspection and maintenance are necessary to ensure optimal braking performance and reliable operation on the road.

The major global manufacturers of Brakes include Federal-Mogul, Aisin-Seiki, Robert Bosch, Brembo, Continental, Delphi Automotive, Nisshinbo, SGL Carbon AG, TRW, Tenneco, Akebono Brake Industry, Bendix, Sangsin, Longji Machinery, MIBA AG, BPW,
