### Research Summary

Brazing alloys are specialized filler metals used in the brazing process to join two or more base metals together. These alloys are designed to have a lower melting point than the base metals being joined, enabling them to flow and bond the components without melting the base metals. Brazing alloys are typically composed of a combination of metals, such as silver, copper, zinc, nickel, and sometimes phosphorus or tin. The selection of brazing alloys depends on factors such as the base metals being joined, the desired strength of the joint, the operating temperature of the application, and the specific properties required. Different brazing alloys offer varying levels of strength, corrosion resistance, conductivity, and other characteristics. By carefully selecting and using the appropriate brazing alloy, strong and reliable joints can be created in various industries, including automotive, aerospace, plumbing, and electronics.

The major global manufacturers of Brazing Alloys include Harris Products, Lucas-Milhaupt, Umicore, Nihon Superior, Morgan, Prince & Izant, Saxonia, Aimtek, Materion, Sentas-BIR, Wall Colmonoy, Tokyo Braze, Linbraze, VBC Group, Pietro Galliani, Stella
