Research Summary

A breath analyzer is a device used to measure the concentration of certain gases, such as alcohol or other volatile substances, in a person's breath. It is commonly used in applications like alcohol testing for drivers, workplace safety, medical diagnostics, and even monitoring health conditions. The device works by having the user exhale into a mouthpiece, where the breath sample is analyzed for the presence and concentration of specific compounds. In alcohol detection, for instance, the breath analyzer measures the amount of ethanol in the breath, providing an estimate of the individual's blood alcohol concentration (BAC). Breath analyzers typically use sensors like semiconductor, electrochemical, or infrared sensors to detect and quantify gases, and they are valued for their non-invasive, quick, and relatively accurate readings, offering a convenient tool for law enforcement, healthcare providers, and others to assess potential intoxication or health concerns.

The major global manufacturers of Breath Analyzer include NIOX Group plc, Headway, Sunvou Medical Electronics Co, Richen Holding, Meridian Bioscience, CAPNIA, Inc.,
