Research Summary

Breathable film is a type of material that allows air and moisture vapor to pass through while preventing the passage of liquids and particulates. It is commonly used in various applications, including protective clothing, medical products, packaging, and construction materials. Breathable films are typically made from polymers or laminated materials with microporous structures or specialized coatings. The micropores or perforations in the film enable the transfer of air and water vapor, promoting breathability and reducing the risk of heat buildup, moisture accumulation, and discomfort. This feature makes breathable films suitable for applications where a balance between protection and breathability is desired, such as in protective garments, diapers, wound dressings, and roofing membranes. Breathable films offer enhanced comfort, durability, and functionality in a range of industries and products.

The major global manufacturers of Breathable Film include Mitsui Chemicals, Daedong, Hans Chemical, Hanjin P&C, Swanson Plastics, FSPG Huahan, Liansu Wanjia, AvoTeck, Shandong HaiWei, Shanghai Zihua, etc. The global players competition
