Research Summary

A breathalyzer is a portable device used to estimate a person's blood alcohol concentration (BAC) from a breath sample. It works based on the principle that alcohol in the blood is transferred to the breath in predictable ratios. When a person exhales into the breathalyzer, their breath is analyzed to determine the alcohol content. The device typically uses fuel cell technology or infrared spectroscopy to detect and measure the amount of alcohol present in the breath. Breathalyzers are commonly used by law enforcement agencies for roadside sobriety testing to assess if an individual is driving under the influence of alcohol. They are also available for personal use, providing individuals with a means to monitor their alcohol levels and make responsible decisions regarding their ability to drive or operate machinery. Breathalyzers have become an important tool in promoting public safety and discouraging drunk driving by providing a quick and convenient method to assess alcohol impairment.

The major global manufacturers of Breathalyzer include Draeger, Abbott, Intoximeters, Lifeloc Technologies, BACtrack, Quest Products, C4 Development, Andatech Private,
