Research Summary

A briquette refers to a compressed block of combustible materials, typically made from biomass, coal dust, charcoal, or other similar materials. Briquettes are commonly used as a fuel source for heating, cooking, and industrial processes. They are formed by applying pressure to the raw materials, often with the help of binding agents or additives, to create a dense and uniform product. The process of briquette production involves crushing, drying, and compacting the raw materials into a specific shape, such as cylindrical or rectangular, using briquetting machines or molds. The compact nature of briquettes allows for easier storage, transportation, and handling compared to loose materials. They offer advantages such as high energy efficiency, low ash content, and reduced emissions. Briquettes are widely used in households, restaurants, and industries as an alternative to traditional fuels, promoting sustainable and environmentally friendly practices.

The major global manufacturers of Briquette include BIOMAC, BMK Woods, BIOGRA, Biomass-wood, VIGIDAS PACK, Wood Energo, BALT WOOD, Green Biocoal, SGFE, Chardust, Global Woods Group, Ko??al, Well Seasoned Wood, Lignetics, Real Tech
