Research Summary

Brominated Polystyrene (BPS) is a type of flame retardant that is derived from polystyrene through the addition of bromine atoms. Polystyrene is a widely used thermoplastic polymer known for its versatility and low cost. The bromination process involves replacing some of the hydrogen atoms in the polystyrene structure with bromine atoms, which enhances its flame retardant properties. BPS is effective in reducing the flammability and spread of fires, making it valuable for applications where fire safety is a concern. It finds use in various industries, including electronics, construction, and automotive, where it is incorporated into products such as electrical enclosures, insulation materials, and fire-resistant coatings. BPS offers a balance between fire safety and material performance, providing an important solution for reducing fire risks in a range of applications.

The major global manufacturers of Brominated Polystyrene (BPS) include Lanxess, Albemarle, ICL, Shandong Brother, Shandong Tianyi, Sunris, Shandong Runke, Shouguang Derun, etc. The global players competition landscape in this report is
