Research Summary

Buffer tanks, also known as storage tanks or expansion tanks, are vessels used in various systems to store and regulate fluids, particularly in heating, cooling, and hydronic systems. These tanks are designed to provide a buffer or reserve volume of liquid or gas to accommodate fluctuations in demand or supply. In heating systems, buffer tanks help stabilize water temperature by storing excess heat generated by the heat source and releasing it when needed. They prevent short cycling and improve system efficiency. In cooling systems, buffer tanks store chilled water to meet sudden increases in demand and maintain a consistent temperature. Buffer tanks can also be used in water distribution systems to provide a steady flow and pressure. The size and capacity of buffer tanks vary depending on the specific application and system requirements. Overall, buffer tanks play a vital role in ensuring system stability, reducing energy waste, and enhancing the performance of various fluid-based systems.

The major global manufacturers of Buffer Tanks include Wessels, Amtrol, Cordivari, Grundfos, Lochinvar Products, Vaughn, Hot Water Products, EMIS, Flexcon Industries, AERCO, Niles Steel Tank, Automatic Heating, Cemline, etc. The global players
