Research Summary

A Building Energy Management System (BEMS) is a computerized system designed to monitor, control, and optimize energy usage within a building or facility. It integrates various components, including sensors, meters, controllers, and software, to collect and analyze data related to energy consumption, environmental conditions, and equipment performance. BEMS enables facility managers to gain insights into energy usage patterns, identify areas of inefficiency, and implement strategies to reduce energy consumption and costs. It allows for centralized control and automation of building systems such as HVAC (heating, ventilation, and air conditioning), lighting, and power distribution, optimizing their operation for energy efficiency. BEMS can also provide real-time alerts and notifications, perform energy benchmarking, support energy conservation measures, and facilitate remote monitoring and control. By providing comprehensive energy management capabilities, BEMS plays a crucial role in improving sustainability, reducing carbon emissions, and achieving energy savings in buildings and facilities.

The major global suppliers of Building Energy Management System (BEMS) include Schneider Electric, Siemens, Honeywell, ABB, Johnson Controls, GridPoint, General Electric, Emerson Electric, Eaton Corporation, Azbil, Tongfang Technovator, Shenzhen Sunwin Intelligent, KMC Controls, Verdigris Technologies, Optimum Energy, Hoffman Building Technologies, Hitachi, etc. The global players competition landscape in this report is divided into three tiers.
