### Research Summary

A Building Management System (BMS), also known as a Building Automation System (BAS) or Building Control System (BCS), is a computer-based control system that monitors and manages various building systems and equipment to optimize their performance and improve energy efficiency. It integrates and automates the control of systems such as heating, ventilation, air conditioning (HVAC), lighting, security, fire alarms, and other building systems. The BMS collects data from sensors and devices throughout the building, enabling centralized monitoring, control, and analysis of the building's operations. It allows building owners and facility managers to remotely monitor and control building systems, optimize energy usage, enhance occupant comfort, detect and diagnose faults, and streamline maintenance and operational processes, ultimately leading to improved building performance and operational efficiency.

The major global suppliers of Building Management System include Johnson Controls, Schneider, Siemens, Honeywell, UTC, Trane, Beckhoff, Delta Controls, Azbil, Cylon,
