Research Summary

Bulletproof laminated glass is a specialized type of glass designed to provide high levels of ballistic protection against projectiles and other ballistic threats. It is composed of multiple layers of glass and interlayer materials, typically polyvinyl butyral (PVB) or ethylene-vinyl acetate (EVA), which are bonded together under heat and pressure. The interlayer acts as a cohesive barrier, preventing the glass from shattering upon impact. This construction allows the glass to absorb and disperse the energy of a bullet or projectile, minimizing its penetration or fragmentation. Bulletproof laminated glass offers enhanced safety and security in various applications, including banks, government buildings, high-security facilities, armored vehicles, and even residential structures. Its transparency and ability to withstand ballistic forces make it an essential component in providing protection while maintaining visibility.

The major global manufacturers of Bulletproof Laminated Glass include AGC Glass Europe, Saint-Gobain, Guardian, CSG Holding, PPG, Fuyao Group, Taiwan glass, Viridian, Schott, etc. The global players competition landscape in this report is divided
