### Research Summary

Bus duct, also known as busway or busbar trunking, is an electrical distribution system used to transmit power within a building or industrial facility. It consists of a metal enclosure that contains multiple conductive bars, known as busbars, which carry electrical current. The busbars are made of copper or aluminum and are typically arranged in a compact and insulated enclosure, providing a safe and efficient means of distributing electricity to various loads. Bus ducts offer advantages such as flexibility in installation, ease of expansion, and reduced power losses compared to traditional cable-based systems. They are commonly used in commercial buildings, data centers, manufacturing plants, and other settings where a high capacity and reliable power distribution system is required. Bus ducts are available in different configurations, such as sandwich-type, segregated-phase, or compact bus duct, and can accommodate various voltage levels and current ratings to meet specific electrical requirements.

The major global manufacturers of Bus Duct include Schneider Electric, Siemens, ABB, Eaton, LS Cable, Legrand, DBTS Ind, Godrej & Boyce, Furukawa Electric, Powell, Honeywell, Dynamic Electrical, PPB, KYODO KY-TEC Corp., Amppelec, Huapeng
