### Research Summary

A busway system, also known as bus duct or busbar trunking system, is an electrical distribution system used to transmit power in a building or industrial facility. It consists of a series of conductive busbars enclosed in a protective housing made of non-conductive materials. The busbars, typically made of copper or aluminum, carry electrical current from the main power source to various distribution points or loads within the facility. The busway system offers several advantages over traditional cable-based distribution systems, including higher electrical efficiency, easier installation, flexibility for adding or relocating electrical loads, and reduced maintenance needs. Busway systems are commonly used in commercial buildings, data centers, industrial facilities, and other environments where a high-capacity and reliable power distribution system is required. They provide a safe and efficient means of transmitting electricity, allowing for the seamless and effective operation of electrical systems in diverse applications.

The major global manufacturers of Busway System include ABB, GE, Legrand, Schneider Electric, Siemens, Eaton, L&T, C&S Electric, Elbagate, Busbar Services,
