### Research Summary

Butane is a highly flammable hydrocarbon gas that belongs to the alkane family. It is composed of four carbon atoms and ten hydrogen atoms, with a chemical formula of  $C_4H_{10}$ . Butane is commonly found in natural gas and is also produced as a byproduct of petroleum refining and natural gas processing. It is colorless and odorless in its pure form but is often mixed with odorants for easy detection in case of leaks. Butane is widely used as a fuel for various applications, including portable stoves, lighters, and torches. It is also used as a propellant in aerosol products, such as hairsprays and deodorants. Butane has a relatively low boiling point, making it easy to vaporize and use as a fuel source. However, due to its flammability, proper handling and storage precautions should be taken to ensure safety.

The major global manufacturers of Butane include Saudi Aramco, Sinopec, ADNOC, CNPC, Exxon Mobil, KNPC, Phillips66, Bharat Petroleum, Pemex, Total, BP, Equinor, Qatar Petroleum, Gazprom, Chevron Phillips Chemical, ConocoPhillips Company, Shell, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial

market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
